Find

Bootstrap component sets

Components from the UI sets listed here can probably be used as-is in Tiki, by copying the HTML for the component and pasting it into a Tiki page, in a PluginHTML. This list is tentative and not comprehensive, and not really tested so far. The idea is to speed up page construction by inserting the complete code for a section, div, or other page element, avoiding the need to create the element from scratch. After pasting in the HTML, just replace any dummy text and images, etc. with the real content of the page.

#### Bootstrap-compatible collections of components
