Find

Making or Updating a Theme for Tiki 27

More detailed information is coming, but at least here's a heads-up about some significant changes in theme file organization and SCSS compiling methods.

- The theme's main file is now in themename/css/ directory. It is no longer in themename/scss.
- The recommended SCSS compiling method now uses Node.js and NPM rather than a PHP script, so the work environment should have these installed.

More coming soon.
