This is a Tiki adaptation of the Planetfall theme originally done by rhuk for the Mambo CMS (now Joomla). This theme won mamboportal.com's theme competition and was included as a default style for Mambo. Planetfall is released under the GPL license. See [Planetfall](#) for more information.

The main difficulty with adapting the theme to Tiki was to convert it from a fixed-width page design to the fluid width needed to display Tiki's variable-width content. Also, Tiki has many more bundled features than Mambo/Joomla, and these all had to be given the Planetfall look.

Hints for personalizing Planetfall are at [Planetfall](#), and planetfall.zip, which includes templates, CSS file, and images, can be downloaded [here](#). Please go to the [Planetfall](#) for support and other discussion about this theme.
